

Final Analysis

By using Mary's paternal DNA matches, we were able to identify her biological grandfather, Samuel Alexander Hampton, the son of Hannah Ross.

This research also allowed us to identify Mary's two closest paternal matches, MLM and KH and learn where they fit into her tree.

Because her relationship with KH was above the threshold for a half first cousin once removed, we researched KH's great grandmother Muriel Helen Smith and determined that she, MLM, and Mary have a relationship of second cousins twice removed through the Dobbie family.

Muriel Helen Smith's connection is through another of Mary's ancestral lines, Dobbie. This family is connected to Mary through her paternal great grandfather, William Wesner. This line was researched and is discussed in a separate presentation.
